

RAG System Architecture Guide

1. Introduction

This document describes the modular RAG system design.
The system uses a pluggable architecture for all components.

2. Components

The following table shows key components:

Component	Provider	Description
LLM	GLM-4.7	Text generation
Embedding	text-embedding-3-small	Vector encoding
VectorStore	ChromaDB	Vector storage

3. Query Pipeline

Query goes through: HybridSearch -> RRF Fusion -> Rerank -> Response.
Dense retrieval uses cosine similarity in ChromaDB.
Sparse retrieval uses BM25 keyword matching.
